Objective

Software engineer with a background in Mechatronics engineering, I have a passion in both web development and embedded systems. I pride myself on innovative problem solving and providing creative solutions.

I aim to take this strength and my career toward the medical field in my future, as the ability to use technology to help those who need is an area I find purpose in for my work.

I seek to utilise my strong communication and programming skills to drive my career and provide value to any company I may find myself developing as an engineer within.

Employment History

Thales Australia

July 2022 - Present

Software Solutions Engineer (July 2025 - Present)

Graduate Software Engineer (July 2023 - July 2025)

Junior Software Engineer (July 2022 - July 2023)

Achievements

- Successfully containerised an important in-house simulation software using Docker.
- Fabricated a new hypervisor simulation environment for a simulator technology refresh.
- Developed a new Unreal project in a collaborative team to display the power of Unreal Engine 5 in collaborative combat scenarios for use by Thales Australia to display at an annual military conference.
- Rendered high quality media content for a Thales press release.

Responsibilities

- Managing and maintaining a simulation environment while working as a System Administrator.
- Developer for containerising and deploying in-house simulation software.
- Research and development into support of Unreal Engine as an Image Generator for combat simulation purposes through the use of Distributed Interactive Simulation (DIS) protocol.
- Maintaining and demonstration of simulations present in the Customer Oriented Operations Lab to stakeholders and potential customers.

Football Federation Australia

January 2021 – July 2022

ITC Casual (February 2021 - Present)

PlayFootball Customer Support Officer (January 2021 - March 2021)

Achievements

- Successful delivery of over 1000 ITCs (International Transfer Clearances).
- Achievement of the highest average rate of calls per hour taken within the customer support call centre for the January/February period at 7.4 calls per hour compared to the next highest of 6.05 calls per hour.

Responsibilities

- Provide telephone and email support to key stakeholders, clubs, players & parents.
- Assist with the provision of International Transfer Certificate requests to International football associations seeking to bring International players both to and from Australia.
- Coordinate and liaise with State member federations to establish clearance for departing players.

Sydney Trains

February 2020 - July 2020
Junior Systems Engineer

Achievements

- Successfully completed a Requirements Analysis and Traceability Matrix (RATM) for two projects: the upgrade of Acoustic Bearing Monitors and renewal of computer servers on the Mechanised Track Patrol Rail Vehicles (MTPV).
- Successful delivery of Test Planning documents for the MTPVs for Condition Monitoring.
- Accomplished data analysis of 3,233 track circuits of the 7,000 plus track circuits in the rail network.

Responsibilities

- Involvement in the Engineering process including producing Requirements Analysis and Traceability Matrix, Feasibility Analysis, Test Planning, Data Analysis.
- Conduction of data analysis on Track Circuits to form the basis for the creation of a new database.

Education

University of Technology Sydney

March 2017 – July 2023
Bachelor of Engineering (Honours) with Professional Practice
Major in Mechanical & Mechatronics

Achievements

- Achieved a WAM of 78.52 with a GPA of 5.95 [Distinction Average].
- High Distinctions (85 or higher) in the following subjects: Introduction to Mechanical and Mechatronic Engineering; Mathematical Modelling 2 (statistics); Design and Innovation Fundamentals; Dynamics and Control; Mechanical Design 1; Heat Transfer; Sensors and Control for Mechatronic Systems.
- Placed on the Undergraduate Dean's List for 2021 (achieved for achieving at least an 85% average for a whole calendar year).

Technical Skills

Software - **Docker; Networking; REST APIs; Postgres; Unreal Engine 5**

Coding - **Docker; TypeScript; JavaScript; Angular; CSS; C++; Git**

Transferrable Skills

Communication - Can communicate effectively within multi-disciplinary scenarios, as demonstrated through the diverse engineering teams I have worked with at Thales Australia & Thales Global, as well as through administration of soccer matches as referee.

Fast Learner - Aptitude to pick up a designated concept quickly, as displayed through how I was able to complete analysis on half the track circuits in the whole Sydney Metropolitan network over my 6 month internship at Sydney Trains.

Leadership - Ability to sufficiently direct & manage others in order to make tasks more achievable, as evidenced through my successful captaincy of my local football team during early 2020s.

Referees

Available upon request
